

Energy Policy

At Techint Engineering & Construction, we manage our processes sustainably to continuously improve our energy performance.

Our Energy Policy is aligned with the Ten Principles of the United Nations Global Compact, driving collaborative projects aimed at achieving the UN Sustainable Development Goals together with our employees, clients and partners in general.

We are committed to optimizing the use of supplies, materials and energy as part of our efforts to preserve natural resources, benefit the economy and society as a whole, and protect the environment where we operate.

In order to implement this Energy Policy:

- **We define and articulate this Policy from Management, involving each and every one of the people who work in the company.**
- **We comply with current legislative requirements and adhere to the commitments made as regards energy management, use and consumption as well as energy efficiency.**
- **We set energy performance objectives and goals as part of our processes, ensuring the necessary resources are available to carry them out.**
- **We measure and monitor energy use and consumption throughout our processes, documenting the information obtained and communicating all energy-related aspects.**
- **We identify good practices and disseminate them, promoting continuous improvement in energy matters.**
- **We promote greater awareness and commitment by carrying out awareness campaigns at all levels of the company.**
- **We encourage innovation and the use of improved technologies that contribute to reducing our carbon footprint.**
- **We adhere to energy efficiency criteria in our processes to acquire and design our services and products.**
- **We periodically review and update our energy management system, guaranteeing excellent compliance with our commitments.**

The principles of our Energy Policy are aligned with the fundamental principles of the Company's Management Policy.
